

Srihari K G

M.Tech. Artificial Intelligence

CGPA: 7.9

ACADEMIC PROFILE

M.Tech - M.Tech. Artificial Intelligence	7.9	Indian Institute of Science	2027
B.Tech - B.Tech in Computer Science and Engineering	9.61	Indian Institute of Technology Dharwad	2025
Class XII(Karnataka State Board)	99.83	Kumarans Comp PU College	2021
Class X(Karnataka State Board)	99.2	St Philomena's School	2019

PROJECTS

Explainable AI	Jan'24-Dec'24
– Proposed a refinement method for CAMs using Singular Value Decomposition to improve visual interpretability. – Investigated various Explainable AI (XAI) techniques, including CAM, GradCAM, and Integrated GradCam as well as their layered variations.	
Clinical Depression Detection	Aug'23-Nov'23
– Project aimed at detecting clinical depression using modulation spectrograms in combination with Deep learning techniques under the guidance of Prof. Mahadeva Prasanna. – Assessed the performance of various architectures, including ViT, MLP Mixer, and ConvMixer etc. – Best results with the ConvMixer model by applying the SMOTE technique on the EATD corpus	

INTERNSHIPS

Indian Institute of Science, Bengaluru	Project Assistant	Jan'25-Jul'25
– Developed feed-forward methods for controllable and efficient 3D Gaussian scene representations, eliminating the need for per-scene optimization or post-pruning fine-tuning. – Designed texture-aware pruning using spatial-color clustering and wavelet-based complexity ranking to remove redundant Gaussians while preserving rendering quality. – Demonstrated strong quality-efficiency trade-offs on multiple real-world and synthetic datasets, enabling real-time novel-view synthesis with significantly fewer Gaussians.		
Shaale	ML intern	Feb'24-Jun'24
– Built AI features for a self-learning music platform, enabling real-time interaction. – Developed audio-to-spectrogram-based vision models for musical-syllable prediction and clap-pattern detection. – Implemented and integrated REST APIs to deploy these models and ensure smooth backend communication.		
Research Internship	NLP intern	May'23-Jul'23
– Worked under the guidance of Prof. Kushal Shah on classifying under-resourced Sanskrit texts. – Explored statistical features and experimented with probabilistic and machine-learning models to classify Sanskrit verses with high accuracy. – Investigated deep neural network models to uncover deeper linguistic patterns within the texts.
